

Research and Development

Creativity is one of ULTIMedia's points of excellence. We have developed over the years a solid experience that is reinforced by exceptional creative talents further refined by a leading expert in architecture and design.

Our Research Department's strong design expertise is rooted in expert knowledge of the interactive technology world.

This experience, combined with state-of-the-art CAD tools facilitates the development of prototypes from which we create reliable models. ULTIMedia's historical role in digital 3D can be traced to its founder, Eric Dumouchel, who was beta tester of the first #D CAD technology in the 80's.

Research and development

For over 10 years, ULTIMedia has made substantial investment in the research and development of innovative solutions in the areas affected by more advanced interactive technologies. We were the first to significantly reduce the size of our kiosks and offer sleek design for our models.

Testing and research is carried out in our design office, in a constant effort to improve performance in all areas of interactive technology, including new kiosk printers, dedicated terminals, new models of interactive kiosks, new security systems and new touch technologies...

Research & Development Office

Our R&D office offers a wide range of tools:

- Prototypes and design in 3D
- Blue prints of parts, equipments or fixtures.
- Modeling of sheet metal parts with 2D flattening
- Modeling of parts and assemblies in 3D
- Exploded views of 3D assemblies for technical references

ULTIMedia operates on a Total Quality Management policy, from conception to operational implementation.

Our team assumes shared responsibility and is committed to one cause: the success of your project.

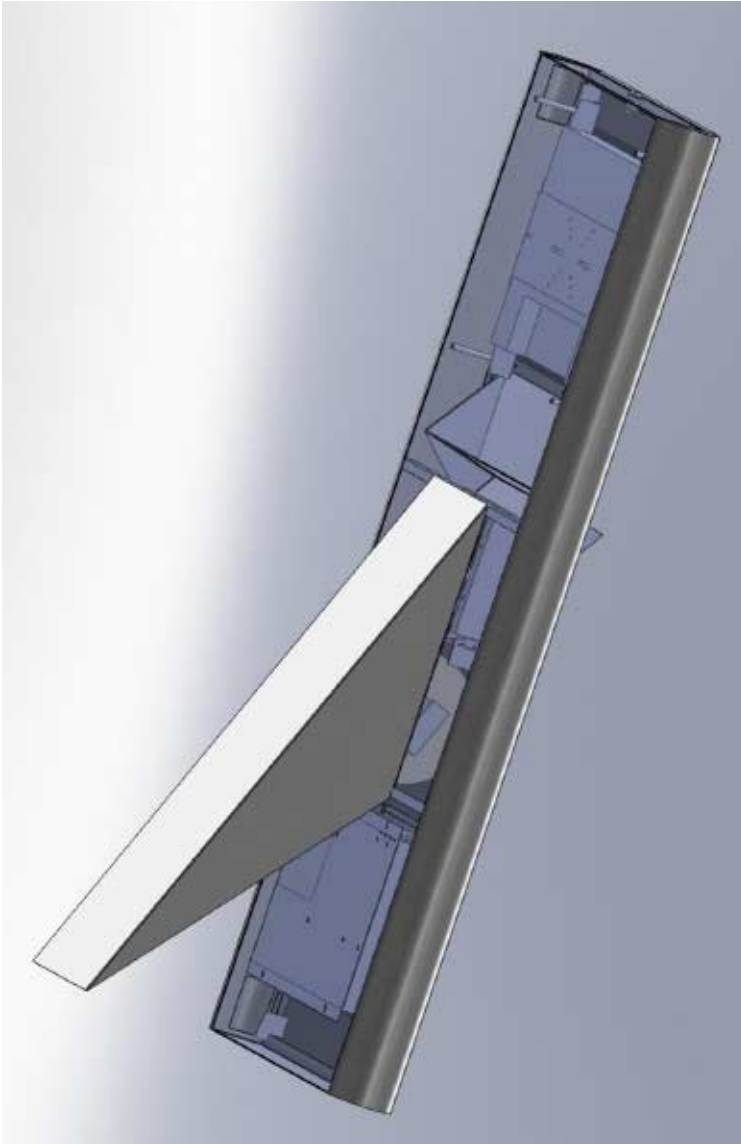

Our most recent digital capacities (both in terms of conception and fabrication) allow us to offer customers a great ability to react to their needs and an unsurpassed reliability within the context of a specific project development.

- Realistic renderings and 3D animations
- Picture graphics in real environment
- Technical assistance
- Project management processes.
- Full HD movies
